

To whom it may concern,

As the lead engineer of the Test Automation Group in Mexico, I am writing to support Alfonso Vega Garza for the position of QA Test Automation Engineer. I have had the opportunity and privilege to work with Alfonso in the Test Automation Group. Alfonso, a mechatronics student in UNAM at the time, was selected as our top pick for the Design Engineer Apprentice Program for July 2019 to December 2019.

Alfonso was a great addition to our team, in just a couple of weeks he assimilated a completely new graphical programming language and architecture, and within 4 weeks he was performing at a high level. He oversaw the requirements, designing both the test and the code, being able to anticipate request from the Design Team.

He outperformed our expectations and delivered 3 projects in the 5 months that he was working with us. He successfully delivered a universal motor sequencer that applies a variable load measuring the current of the device under test, a redesign of software for radio frequency testing, and an automated data retriever with statistical analysis. All while also supporting us with mechanical assembly of fixtures, always willing to learn new things.

I believe that Alfonso has a tremendous amount of potential and would be an outstanding addition to your staff. He is our first option for any position that becomes available in our team and I am confident in recommending Alfonso for employment with your company

If you have any further questions or would like to speak with me personally, please feel free to contact me.
